

# Latex leggings

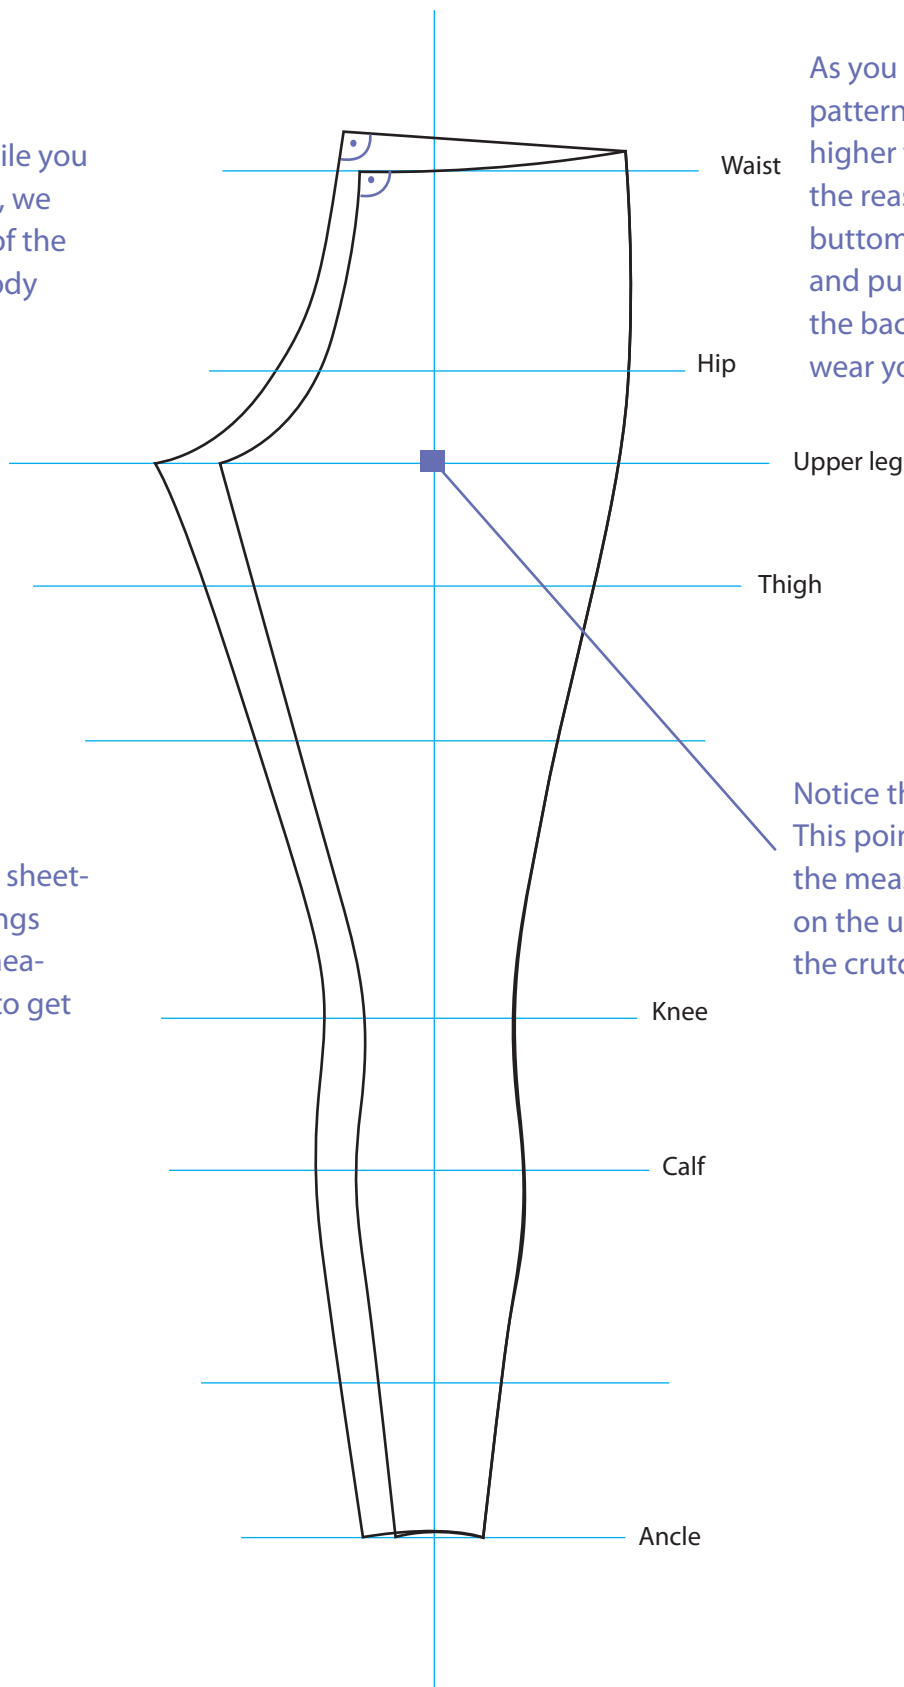

Latex thickness: 0.30 mm

Design by Latex Kitty  
Makinglatexclothing.com

As you can see here, the backpart of the latex leggings is bigger than the front part, so please pay attention to it while you make your pattern.

To avoid too many unwanted folds while you wear your leggings, we shape the pattern of the leggings to your body contours.

As you can see is the pattern of the backpart higher than the front part, the reason for it is that your bottom will need the space and pulls the waistline in the back down when you wear your leggings.

Notice the helping lines. This point is the middle of the measurements taken on the upper leg, where the crutch is.

I used 0.3mm latex sheeting for those leggings and reduced the measurements by 8%, to get them tight.
